A linked-data collection of movies, actors, directors, and the relationships between. Edit

Linked Movie Database Edit

An RDF graph containing a linked-data collection of movies, actors, directors, and the relationships between all of those entities.

This dataset contains a copy of the Linked Movie Database synced from this URL:
<http://www.cs.toronto.edu/~oktie/linkedmdb/linkedmdb-18-05-2009-dump.nt>

This data is the work of [Oktie Hassanzadeh](#) and [Mariano P. Consens](#)

Querying the data with SPARQL, you can uncover some interesting facts:

Cast of Pulp Fiction and Number of Movies Acted In

CSVW Namespace Vocabulary Terms

W3C Document 22 May 2017

Latest editor's draft:

<http://w3c.github.io/csvw/ns/>

Editor:

Gregg Kellogg, [Kellogg Associates](#)

Repository:

[We are on GitHub](#)

[File a bug](#)

Changes:

[Commit history](#)

This document is also available in these non-normative formats: [Turtle](#) and [JSON-LD](#)

Copyright © 2017 W3C® ([MIT](#), [ERCIM](#), [Keio](#), [Beihang](#)). [W3C liability, trademark and document use rules](#) apply.

Abstract

This document describes the CSVW Namespace Vocabulary Terms and Term definitions used for creating Meta-data descriptions for Tabular Data. This document provides the RDFS [[RDF-SCHEMA](#)] vocabulary definition for terms defined in [[tabular-metadata](#)] and a description of the JSON-LD context definition for use with defining metadata documents.

Alternate versions of the vocabulary definition exist in [Turtle](#) and [JSON-LD](#), which also includes the `@context` required for metadata descriptions. These versions may also be retrieved from <http://www.w3.org/ns/csvw> using an appropriate HTTP *Accept* header.

HDT – Your binary format for RDF

"HDT compresses big RDF datasets while maintaining search operations" ([Read more](#))

What is HDT

Discover HDT (Header, Dictionary, Triples), a compact data structure and binary serialization format for RDF

RDF

Header

Logical and physical metadata describing the RDF data set. It serves as an entrance point to the information.

Dictionary

Mapping between elements in the data set and unique IDs, thus contributing to compactness.

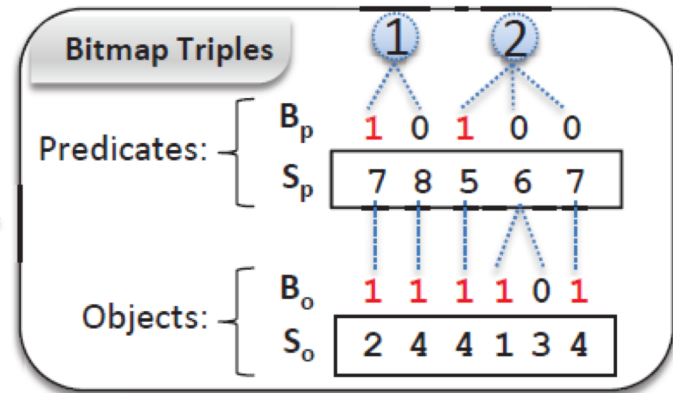

Triples

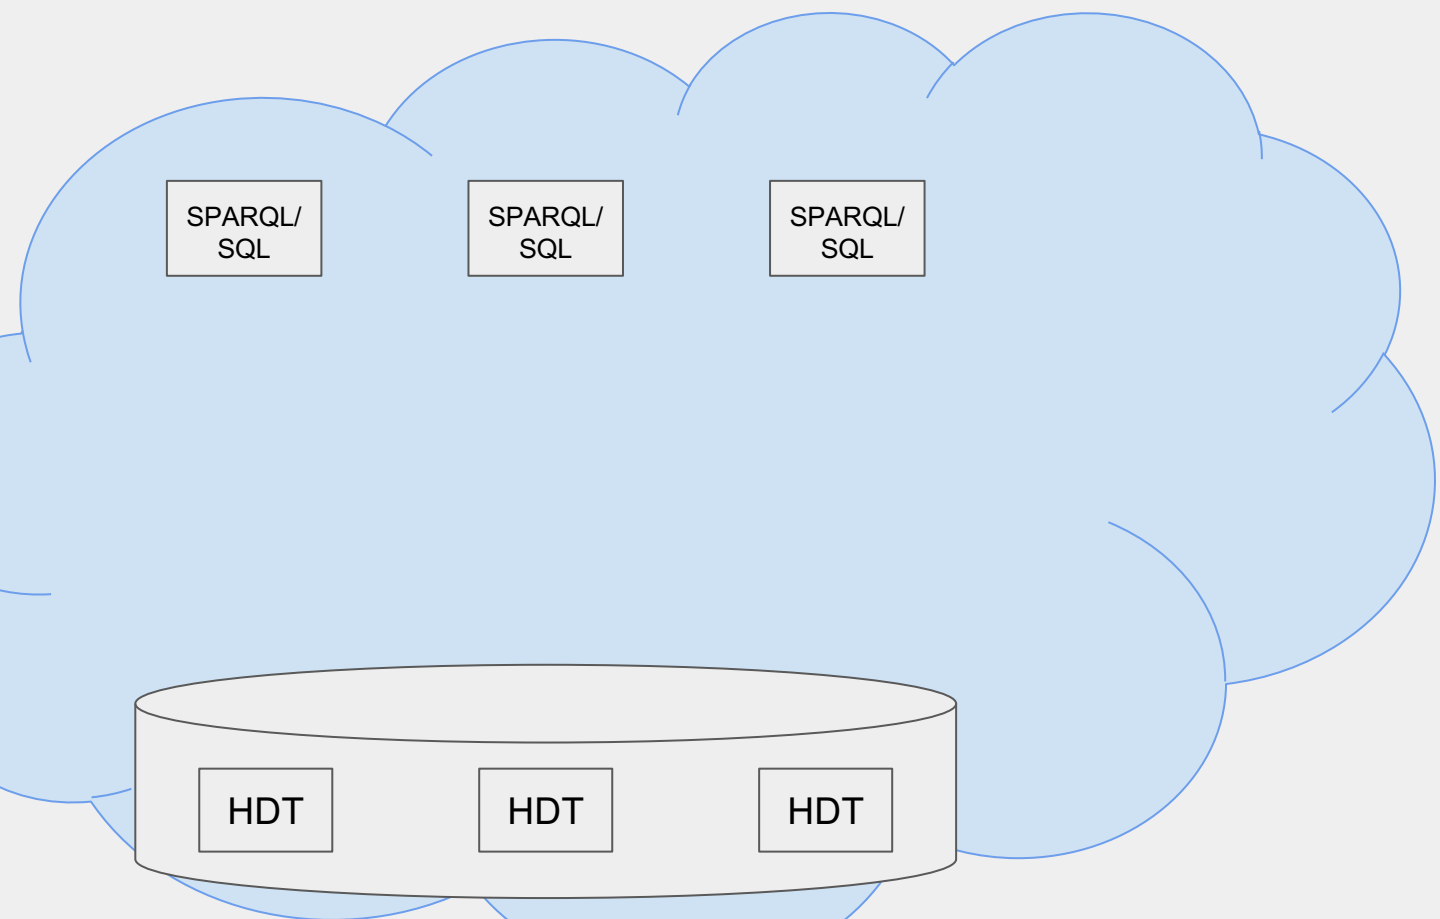

Structure of the data after the ID replacement, in a compressed form.

ID-triples

1	7	2	.
1	8	4	.
2	5	4	.
2	6	1	.
2	6	3	.
2	7	4	.
